Art Unit: 2124

1. The abstract of the disclosure is objected to because the abstract should be limited to a single paragraph within the range of 50 to 250 words in a separate sheet.

Correction is required. See MPEP § 608.01(b).

2. The disclosure is objected to because of the following informalities:

Page 7, first complete paragraph and Fig. 7a; the details are inconsistent with the invention, core filter (1) coupled between decimator (2) and interpolator (3). Clarification is requested.

Appropriate correction is required.

3. Claims 4-11 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-11 have not been further treated on the merits.

4. Claims 2-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claims 2-3, the terms "can be" are indefinite.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2124

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Chester (applicants' admission Prior Art).

As per independent claim 1, Chester teaches, e.g., see Fig. 9 [and Fig. 11], the claimed combination. The "3rd stage", "4th stage" and "5th stage" are the claimed "decimator (2)", "core filter (1)" and "interpolator (3)", respectively.

As per dependent claim 2, the claim adds "parallel filter paths are provided for the decimator (2) and/or the interpolator (3) which can be sampled cyclically". Chester's Fig. 3 shows a filter having the claimed feature.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chester in view of Vaidyanathan "Multirate Systems and Filter Banks" (applicants' admission Prior Art).

Chester has been discussed in paragraph 6 above.

Art Unit: 2124

As per claim 3, the claim adds the detail of "core filter". Vaidyanathan discloses the polyphase separation of filters. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to combine Vaidyanathan "polyphase separation of filters" feature in Chester, thereby making the claimed invention, because the proposed device is a filter unit having polyphase separation as claimed.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references are art of interest.
